Chapter 1: Fractions

Fractions describe equal parts of a whole.

The numerator counts chosen parts; the denominator counts total equal parts.

Formula: a/b + c/d = (ad + bc)/bd

Theorem: Fractions with the same denominator can be added by adding their numerators.

Chapter 2: Linear Equations

A linear equation has the form ax + b = c.

Use inverse operations to isolate x.

Formula: x = (c - b)/a, when a is not zero.

Theorem: Adding the same value to both sides preserves equality.
